Introduction: Mastering Advanced Vocabulary for the GRE

This is how the makers of the GRE General Test, the Educational Testing Service, describe the verbal reasoning section of the test:

The Verbal Reasoning section measures your ability to:

- analyze and draw conclusions from discourse; reason from incomplete data; identify author's assumptions and/or perspective; understand multiple levels of meaning, such as literal, figurative, and author's intent
- select important points; distinguish major from minor or relevant points; summarize text; understand the structure of a text
- understand the meanings of words, sentences, and entire texts; understand relationships among words and among concepts

What does this mean for you as a student preparing for the verbal reasoning section of the GRE? It means you must make sure you have highly developed skills in all these areas. To make sure you have such skills, you should work through the skills section and practice tests in a reputable GRE General Test guidebook, such as *Barron's GRE Verbal Workbook*. You also need to read widely, thinking critically about what you read. Read high quality books, both fiction and nonfiction, on a wide range of subjects and in a variety of genres. It is also important to read well-written periodicals, such as *The New York Times*, *The Christian Science Monitor*, *The Atlantic*, *The New Yorker*, *Time*, *The Economist*, and *Scientific American*. Such reading will improve your skills in all of the areas described above. If you look up words you do not know as you read in a good dictionary, you will also improve your vocabulary.

Speaking of vocabulary, is knowledge of advanced vocabulary important on the GRE? The answer is yes, very much so. Advanced words appear regularly in all three types of questions: reading comprehension, text completion, and sentence equivalence.

Let's examine some of these types of questions and answer choices to see how important vocabulary is on the revised GRE.

SENTENCE-EQUIVALENCE AND TEXT-COMPLETION QUESTIONS

In the sentence-equivalence question below, you must choose *two* answers that could correctly complete the sentence.

It would be difficult to imagine two more different personalities—Liz is shy and taciturn, while Stan is outgoing and _____.

- A salubrious
- B laconic
- C specious
- D loquacious
- E doctrinaire
- F talkative

Can you arrive at the correct answers to this question without knowing the meaning of the advanced word in the sentence, *taciturn* (incommunicative, not inclined to speak much), and the meanings of the five advanced words that appear in the answer choices? If you don't know the meanings of *salubrious*, *laconic*, *specious*, *loquacious*, and *doctrinaire*, you will be forced to guess one of the correct answers to this question, (D) *loquacious*, which means (F) *talkative*, the second correct answer. Not all sentence-equivalence questions are so vocabulary dependent but you can expect quite a few to require knowledge of very advanced words.

Let's take a look at another type of question that requires knowledge of advanced words. In the first text-completion question below, you must choose *one* answer to fill in the blank.

In most industrial countries, government intervenes in the economy by changing fiscal and monetary policy to _____ the negative effects of the business cycle, despite the fact that there exists no theory supported by conclusive evidence to explain the underlying cause of the business cycle.

remonstrate
exacerbate
understand
establish
mitigate

If you don't know the definition of *mitigate* (to cause to become less harsh, severe, or painful), you will not be able to answer this question correctly. Also, the more words you know in the other answer choices, the more confident you can be in answering the question.

Here's a question that requires you to choose words to fill in *two* blanks.

Some scholars deny that there is a direct correlation between the scientific theory of relativity and intellectual fashions in the arts, pointing out that many important modernist works, such as Igor Stravinsky's (i) _____ symphony *The Rites of Spring* (ii) _____ the theory of relativity.

Blank (i)	Blank (ii)
seminal	presage
syllogistic	antecede
ephemeral	subsume

In this question, all of the answer choices are advanced words. It is not possible to answer this question correctly without knowing the meanings of these advanced words, especially the meanings of the correct answer choices, (i) *seminal* (containing the seeds of later development) and (ii) *antecede* (precede).

The final question below requires you to fill in *three* blanks.

The phrase "It's a matter of (i) _____" is often used to indicate that the real meaning of a statement is being lost in verbiage, often with the implication that there is (ii) _____ or (iii) _____.

Blank (i)	Blank (ii)	Blank (iii)
definition	exculpation	peculation
semantics	meritriciousness	equivocation
debate	obfuscation	vacillation

Two key words in the sentence—*verbiage* and *implication*—are advanced words. It would be impossible to figure out the central meaning of the sentence without knowing the meaning of *verbiage* (an excess of words for the purpose)—and if you don't know the meaning of *implication* (that which is hinted or suggested), you will be hard-pressed to follow the logic of the sentence.

Advanced vocabulary also plays a central part in the answer choices given for this question. Once again, this question would be impossible to answer without knowledge of the meanings of these difficult words. If you know that answer choice (i) *semantics* means “the meaning and interpretation of words,” answer choice (ii) *obfuscation* means “the act of confusing or obscuring,” and answer choice (iii) *equivocation* means “the intentional use of vague language,” the sentence makes good sense.

READING QUESTIONS

Next, let’s consider a GRE-level reading passage and questions. The passage below uses a lot of fairly advanced vocabulary (*indelible, dominion, retroaction, ensuing*) as well as some very advanced vocabulary (*efficacious, plastic, sanction, precipitate, vicissitudes*). You might already be familiar with the first group of words, while you may not know the more advanced words. Not knowing any of these words would make it difficult to understand this passage. The word *plastic* is especially important because it expresses one of the central concepts discussed by the author—the human ability to consciously shape nature.

Do you understand the difficult words in the passage below and in the questions that follow it?

To chop a stick, to catch a fly, to pile a heap of sand, is a satisfying action; for the sand stays for a while in its novel arrangement, proclaiming to the surrounding level that we have made it our instrument, while the fly will never stir nor
 (5) the stick grow together again in all eternity. If the impulse that has thus left its indelible mark on things is constant in our own bosom, the world will have been permanently improved and humanized by our action. Nature cannot but be more favorable to those ideas which have once found an
 (10) efficacious champion.

Plastic impulses find in this way an immediate sanction in the sense of victory and dominion which they carry with them; it is so evident a proof of power in ourselves to see things and animals bent out of their habitual form and obedient
 (15) instead to our idea. But a far weightier sanction immediately follows. Man depends on things for his experience, yet by automatic action he changes these very things so that it becomes possible that by his action he should promote his welfare. He may, of course, no less readily precipitate
 (20) his ruin. The animal is more subject to vicissitudes than the plant, which makes no effort to escape them or to give chase to what it feeds upon. The greater perils of

action, however, are in animals covered partly by fertility, partly by adaptability, partly by success. The mere possibility of success, in a world governed by natural selection, is an earnest of progress. Sometimes, in impressing the environment, a man will improve it: which is merely to say that a change may sometimes fortify the impulse which brought it about. As soon as this retroaction is perceived and the act is done with knowledge of its ensuing benefits, plastic impulse becomes art, and the world begins actually to change in obedience to reason.

—George Santayana (1906)

The first question on the passage requires you to *select the best answer choice*.

According to the author

- (A) whenever nature is shaped by a human being, art is produced.
- (B) art can only come into existence when the plastic impulse ceases to exist in a person.
- (C) art is created when a human being acts on a plastic impulse with awareness of its effect on the world.
- (D) a human creation can only be called art when it is in accord with nature.
- (E) actions prompted by the plastic impulse are always beneficial to human beings.

The second question asks you to *consider each of the three choices separately and select all that apply*.

Based on the information in the passage, which of the following statements would the author be likely to agree with?

- (A) Art is an inherently irrational process.
- (B) Any viable theory of aesthetics must take into account man's relationship to nature.
- (C) All living things are subject to the process of natural selection.

The third question asks you to *identify a sentence in the passage that best meets the description given in the question.*

Select the sentence that provides examples of the plastic impulse at work in human beings.

How did you do on the questions? The correct answer to **Question 1** is **C**. To answer this question correctly, you must understand the meaning of the final sentence of the passage: "As soon as...obedience to reason" (lines 29–32). And to comprehend this sentence, you must understand the meaning of that key word in the passage, *plastic*, which was discussed above.

The correct answer to **Question 2** is **B** and **C**. Here, it is necessary to know advanced vocabulary in the answer choices: *inherently*, *viable*, *aesthetics*.

Finally, the correct answer to **Question 3** is "**To chop a...in all eternity.**" (lines 1–5) As with Question 1, you must know the meaning of the word *plastic* to answer this question correctly.

From our analysis, it is clear that vocabulary plays a critical part in answering GRE Verbal Reasoning questions. Therefore, to give yourself a good chance of correctly answering questions with a lot of advanced vocabulary, you should learn the words that are most likely to appear in such questions.

You may say that you can figure out a word's meaning from context and use elimination. This is true, but only to an extent. Also, guessing words from context and using a process of elimination consumes valuable time that could be better used for figuring out tricky reading comprehension and other questions.

HOW ESSENTIAL WORDS WILL HELP YOU DO WELL ON THE GRE

Now turn to the list of *300 High-Frequency GRE Words* on page 24. These words appear with high frequency on the GRE and, thus, can be learned specifically for the test. They, as well as an additional 500 important words that commonly appear on the GRE, will be taught to you in *Essential Words for the GRE*. Each of the *300 High-Frequency GRE Words* appears with an asterisk in the main section of the book (pages 27–283).

Each of the 800 advanced words in *Essential Words for the GRE* has been carefully selected through reference to published GRE lists, past tests, and on the basis of my many years of experience in preparing students for the test. These 800 words also appear in Barron's GRE Master

Word List and High-Frequency Word List. The principle behind this book is that the best way to learn new words for the GRE is to see how these words are used in complex sentences and practice on exercise material that is similar in content, structure, and level of difficulty to that which appears on the actual test. Practicing on such material will improve your skills in understanding complex sentences and arguments and increase your familiarity with important ideas that appear on the GRE.

THE SYSTEMATIC STUDY OF GRE WORDS

Essential Words for the GRE teaches the important words you need to know. Words are taught in units of ten words, along with their parts of speech, most commonly used definitions on the GRE, and illustrative sentences showing how words are used. The content, style, and tone of the example sentences are consistent with that of sentences appearing in the actual GRE and generally deal with topics in the arts, sciences, and social sciences. Comprehensive exercises at the end of each unit ensure that you know the words and provide practice in their correct use. Many of the words taught in a given unit reappear in subsequent units, both in illustrative sentences and in exercises, providing systematic reinforcement of learning. New to this edition, after every ten units an *Applying Your Knowledge* exercise explains how to use the words you have learned to tackle GRE-style text-completion questions.

To further build your knowledge of GRE vocabulary, definitions and background information on important terms mentioned in the illustrative sentences appear in highlighted boxes labeled *Terms from the Arts, Sciences, and Social Sciences*. The example below shows how this works. In the example, the illustrative sentence for the word *literati* refers to two important terms, the *First Amendment* and *Philistines*. These two important terms are explained in the highlighted box, helping you to gain a firm understanding of the context in which the word *literati* is used and expanding your knowledge of important terms.

literati *n.* scholarly or learned persons

“Any test that turns on what is offensive to the community’s standards is too loose, too capricious, too destructive of freedom of expression to be squared with the *First Amendment*. Under that test, juries can censor, suppress, and punish what they don’t like, provided the matter relates to ‘sexual impurity’ or has a tendency ‘to excite lustful thoughts.’ This is community censorship in one of its worst forms. It creates a regime where in the battle between the **literati** and the *Philistines*, the *Philistines* are certain to win.”

—*U.S. Supreme Court Justice William O. Douglas, dissenting in the case of Roth v. United States, 1957.*

Terms from the Arts, Sciences, and Social Sciences

First Amendment: a part of the United States Bill of Rights prohibiting the federal legislature from making laws that establish a state religion or prefer a certain religion, prevent free exercise of religion, infringe the freedom of speech; infringe the freedom of the press; limit the right to assemble peaceably; limit the right to petition the government for a redress of grievances.

Philistines: people considered to be ignorant of the value of cultures and smug and conventional in their thinking.

It is recommended that you keep a good college dictionary handy as you work through this book. This will allow you to explore additional meanings of words you learn and fine-tune your understanding of nuances in meaning between similar words. Two of the best college dictionaries are *The American Heritage College Dictionary (Fourth Edition)* and *Merriam-Webster's Collegiate Dictionary (Eleventh Edition)*. If you prefer to use an online dictionary, the excellent *American Heritage Dictionary of the English Language*, 4th edition is available for free at Bartelby.com.

MASTERING HIGH-FREQUENCY WORD ROOTS

Other than learning the difficult words likely to appear on the GRE, how can you improve your chances of doing well on the GRE Verbal Reasoning test? The answer is simple: learning important word roots. *Essential Words for the GRE* features extensive information on word roots, prefixes, and suffixes in the *High-Frequency Word Roots* section. This section contains a list of the 300 most important Latin and Greek roots that commonly appear in English words. It also gives you hundreds of derivative words, and includes exercises to improve your ability to make use of roots in remembering words you have learned in this book and in deciphering the meaning of unknown words. In addition to being useful for students taking the GRE, a knowledge of word roots provides a great foundation for the student embarking on a career in fields that use many specialized terms based on Latin and Greek, such as law, science, and medicine.

GETTING STARTED

So, what do you do now? First, take the *Pretest* on the following pages. This will tell you how well prepared you are to deal with the advanced vocabulary that appears on the GRE. After that, you should make a

study plan based on how many words you have to learn and how much time you have before the test.

On pages 20–23 you will find some suggestions to help you plan how to use this book effectively. It is best to study regularly for a relatively short amount of time (30 minutes, for example), rather than intermittently for longer amounts of time.

Pretest

It's time to test your readiness for graduate-level reading. Don't worry. If you aren't familiar with the GRE words in this test, you can be sure you will learn them in Essential Words for the GRE.

Fill in the blank in each sentence by selecting *two* answer choices that fit the overall meaning of the sentence and produce completed sentences that are equivalent in meaning. Answers that are not fully correct will receive no credit.

1. The belief that music is the _____ for the other arts and best exemplifies the power of art to express subtle feelings, was expressed by the critic Walter Pater: "All art constantly aspires towards the condition of music."

- A aesthetic
- B precursor
- C paradigm
- D tome
- E sensitivity
- F model

2. Some scholars believe that the impetus for the building of the Great Pyramid of Giza was for reasons other than the purely functional one of providing imposing and secure burial chambers for pharaohs; these experts see _____ meaning behind its design.

- A an arcane
- B an insipid
- C a nefarious
- D a sportive
- E an obscure
- F a desultory

3. Many statements are not true unless they are _____ by the use of words and phrases such as *sometimes*, *frequently*, *in many cases*, and *most*.
- A sanctioned

*A *bromide* is a commonplace remark or idea.

12. Quantum theory (i) _____ that waves and particles possess a dual nature, with one aspect (ii) _____ in some situations and the other becoming (iii) _____ in other situations.

Blank (i)	Blank (ii)	Blank (iii)
refutes	vacillating	pellucid
queries	vitiating	salient
postulates	predominating	obtuse

13. Dr. Gupta's hundreds of hoaxes (i) _____ the valid research of many of the scientists with whom he had collaborated; fortunately, such (ii) _____ behavior as Dr. Gupta's is (iii) _____ in the history of science.

Blank (i)	Blank (ii)	Blank (iii)
honed	obsequious	an anomaly
tainted	edifying	a paragon
substantiated	unconscionable	a metamorphosis

14. The sociologist Stanley Milgram theorized that the rise of mass society has made it easy for individuals to ignore moral responsibility because the individual is frequently "an intermediate link in a chain of evil," making it possible for a person to (i) _____ his actions by saying, "I was only carrying out my social responsibilities as given in the orders of my superiors; it is not for me to decide the ultimate morality of socially (ii) _____ actions, even if they appear (iii) _____."

Blank (i)	Blank (ii)	Blank (iii)
rationalize	maligned	execrable
stipulate	venerated	Machiavellian
repudiate	sanctioned	sycophantic

Read the passages below, and then answer the questions that follow them based on the information in the passages themselves and in any introductory material or notes. The correct answer may be either stated or merely suggested in the passages.

The term “the arts,” when used to classify a group of academic disciplines at schools and universities, subsumes the study of languages, history, and literature, while universities use the term “fine arts” to refer to painting and sculpture as an object of study. Else-
(5) where the term “the arts” includes painting and sculpture (usually grouped together as “the plastic arts”), music, and literature, and is often extended to embrace dance, mime, and cinema (the word “artist” is used to refer to a practitioner of any of these). Art is commonly opposed to science (as “subjective,” whereas science
(10) is “objective”) and its sense is distinguished from etymologically related words such as “artifact,” “artificial,” and “artisan.”

Select one answer choice for each of the following questions.

15. The word “subsumes” as it is used in line 2 most nearly means
- (A) assumes to be true
 - (B) makes inferior to
 - (C) undermines
 - (D) includes in a less comprehensive category
 - (E) incorporates in a more comprehensive category
16. Based on the information in lines 8–11 (“Art . . . artisan”), which statement would the author be most likely to agree with?
- (A) Two words can be related etymologically but have different meanings.
 - (B) The word “art” has only an accidental and tangential similarity to the words “artifact,” “artificial,” and “artisan,” because it originated from a different word.
 - (C) Artifacts can only be studied subjectively.
 - (D) “Artisan” is an older word than the modern word “artist” is.
 - (E) The words “artifact,” “artificial,” and “artisan” are not cognate.

The following is a review of the book *Understanding Power: The Indispensable Chomsky* by Noam Chomsky.

You may have heard the cynic's version of the golden rule, namely, he who has the gold makes the rules. That is the thrust of this treatise on power by 75-year-old Noam Chomsky, a professor of linguistics at the Massachusetts Institute of Technology (MIT).

(5) He has written more than 30 books on linguistics and current affairs, including the best-selling *Language and Politics* (1990), *Manufacturing Consent* (1994) and *911* (2001). Once called “arguably the most important intellectual alive” by *The New York Times*, this very politically incorrect academic has taught at MIT since
(10) 1955, immediately after graduating with a PhD in linguistics from the University of Pennsylvania. He is currently one of MIT's institute professors, which means he can teach in any department of the university. But, as he notes wryly in this book: “If I even get near Political Science, you can feel the bad vibes starting.”

(15) The book is an edited collection of his lectures and tutorials from 1989 to 1999. Published as a book for the first time, his talks offer high-definition snapshots of the ills of the twentieth century, even as he slices through history to serve up unpalatable truths—like how America's founding fathers actually loathed the idea of democ-
(20) racy, why the United States hires rogue states to fight its wars and why nation-states are the wrong political model for a post-modern world.

He reserves one of his biggest knives for the media, which he takes methodical stabs at for being dictated by the desires of the
(25) elite. With the same vigor, the gleeful iconoclast tells his students why there is not only no such thing as a free lunch, but also no such thing as a free market. As he puts it: “Of course, the ‘free market’ ideology is very useful—it's a weapon against the general population (in the U.S.), because it's an argument against social
(30) spending, and it's a weapon against poor people abroad, because we can hold it up to them and say, ‘You guys have to follow these rules,’ then just go ahead and rob them.”

He also sees the world's current economic star, China, and its people as “brutal,” and so finds no profit in cozying up to either.
(35) Still, conceding that its ascendance to power is unstoppable, he says: “I don't think we should be asking the question, ‘How do we improve relations with China?’ We should be asking other questions like, What kind of relations do we want to have with China?”

The saddest cautionary tale in this book is that of Princeton
(40) University graduate Norman Finkelstein, a bright young man who committed career suicide by exposing best-selling historian Joan Peters—whose book *From Time Immemorial* said Palestinians never

existed—as a charlatan. The problem was that her work had been embraced by most of America’s finest intellectuals—including
 (45) writer Saul Bellow and historian Barbara Tuchman—so Mr. Finkelstein’s expose was akin to calling them frauds.

Eye-brow-raisers aside, the question-and-answer format of this book captures the rhythm of intellectual repartee between Chomsky and his audience but, more importantly, breaks the monotony
 (50) of what would otherwise be his marathon soliloquy on the world’s ills. Indeed, his mind is such a ragbag of ideas that it is not above pondering such things as the validation of vegetarianism. Yet, in the end, his brilliance falls prey to a certain kind of intellectual snobbery, the sort which asserts that heroes are not to be found
 (55) “mentioned in the newspapers.” As he puts it: “If they’re there, you know probably they’re not heroes, they’re anti-heroes.”

Still, love him or hate him, there are not many thinkers around who can proffer credible alternative perspectives on how power corrupts today. This book is as much an antidote to apathy as it is
 (60) a counterweight to elitist thought. As in this paradox he surfaces: “You’ll see that so long as power remains privately concentrated, everybody, everybody, has to be committed to one overriding goal: To make sure that the rich folk are happy—because unless they are, nobody else is going to get anything.

(65) “So, if you’re a homeless person sleeping in the streets of Manhattan, let’s say, your first concern must be that the guys in the mansions are happy—because if they’re happy, then they’ll invest, and the economy will work, and things will function, and then maybe something will trickle down to you somewhere along
 (70) the line. But if they’re not happy, everything’s going to grind to a halt . . . basically, that’s a metaphor for the whole society.”

Select one answer choice for each of the following questions.

17. The phrase *unpalatable truths* as it is used in line 18 most nearly means
- (A) theories that have not been conclusively proven
 - (B) facts that many people don’t like to accept as true
 - (C) facts that are not accepted as true by experts
 - (D) facts about a wide range of topics
 - (E) information that is not widely disseminated

18. Based on the information in the passage, which of the following terms would Noam Chomsky be most likely to apply to the present American economic-political system?
- (A) socialistic
 - (B) anarchic
 - (C) bureaucratic
 - (D) plutocratic
 - (E) theocratic

Consider each of the three choices separately and select all that apply.

19. Which of the following are reasons that the author describes Noam Chomsky as an “iconoclast” (line 25)?
- (A) Noam Chomsky does not accept the presupposition of most historians and political scientists that social phenomena are subject to objective scientific analysis.
 - (B) Noam Chomsky is a maverick among intellectuals because of his view that the media does not play a major role in American society.
 - (C) Noam Chomsky frequently attacks widely held cherished beliefs.

Identify the sentence by writing its first three words and last three words on the line below.

Select the sentence that gives the author’s opinion of the validity of Noam Chomsky’s political views.

UNIT 2

abysmal *adj.* very bad

The **abysmal** failure of the free market system in Russia has led some people to argue that the planned economy of the Soviet Union, while not perfect, was better suited to Russia's history and culture than Western-style capitalism.

Terms from the Arts, Sciences, and Social Sciences

free market: an economic market in which the demand and supply of goods and services is either not regulated or is slightly regulated

planned economy: an economic system in which the production, allocation, and consumption of goods and services is planned in advance. Another term for planned economy is "command economy."

capitalism: an economic and political system in which a country's industry and trade are controlled by private owners rather than the government

accretion *n.* growth in size or increase in amount

*In the 1960s, the American geophysicist Harry Hess conceived the idea of sea-floor spreading, a process in which the new crust in the ocean is continually generated by igneous processes at the crests of the mid-oceanic ridges, causing a steady **accretion** of the crust.*

Terms from the Arts, Sciences, and Social Sciences

geophysicist: one who specializes in the physics of the earth and its environment

igneous: in geology, relating to the formation of rocks by solidification from a molten state. The word *igneous* is from Latin *ignis* (fire).

accrue *v.* to accumulate; grow by additions

*Regulating the growth of large companies when they begin to become monopolistic is a difficult task for government in a capitalist country; if it limits monopolies too much, the nation's firms could become less competitive than foreign companies that enjoy the advantages **accruing** from greater monopolies.*

Terms from the Arts, Sciences, and Social Sciences

monopolistic: having exclusive control over a commercial activity

***aesthetic** *adj.* relating to beauty or art

*Members of the English **aesthetic** movement, such as Oscar Wilde, were proponents of the doctrine of art for art's sake, which is the belief that art cannot and should not be useful for any purpose other than that of creating beauty.*

Aesthetic is also a noun that means a conception of what is artistically beautiful.

*The Gothic **aesthetic** dominated European art and architecture from approximately the twelfth to the fifteenth century.*

Aesthetics is the conception of what is beautiful; it is also a branch of philosophy dealing with beauty and art, and standards in judging them.

An *aesthete* is someone who cultivates a special sensitivity to beauty; often the word refers to a person whose interest in beauty and art is regarded as excessive or superficial.

Terms from the Arts, Sciences, and Social Sciences

Gothic: a style of architecture that was very popular in the late Middle Ages characterized by such features as pointed arches, soaring spaces, and light. In literature the term refers to a genre of fiction that was popular in the eighteenth and early nineteenth centuries. Gothic novels have an atmosphere of gloom, mystery, and horror.

***Alchemy** was the forerunner of the modern science of chemistry.*

*None of their friends could understand the mysterious **alchemy** that caused two people as different from one another as Rob and Barbara to fall in love.*

Terms from the Arts, Sciences, and Social Sciences

alchemy: Modern scientists believe alchemy was not a true science since there's no evidence that anyone succeeded in turning a base metal into gold. Interestingly, however, the word for the modern science of "chemistry" is derived directly from the word "alchemy."

allay *v.* to lessen; ease; soothe

*Improvements in antivirus software have **allayed** many people's fears of having their computers "infected" with malicious software.*

***alleviate** *v.* to relieve; improve partially

*According to some commentators, one of the weaknesses of capitalism is that, although it is very efficient at increasing absolute wealth, it is not as successful at **alleviating** relative poverty; thus, a person living in a slum in America may be reasonably well off by historical standards, but he might perceive himself to be poor compared to members of the bourgeoisie, whom he sees regularly buying luxury goods that he is not able to afford.*

Terms from the Arts, Sciences, and Social Sciences

bourgeoisie: the social order dominated by the property-owning class. The term is associated with Marxism, the political and economic philosophy of Karl Marx and Friedrich Engels, but today it is often used disparagingly to suggest materialism and philistinism (an unenlightened and smug attitude toward culture).

alloy *n.* a combination; a mixture of two or more metals

*Scientists formulate **alloys** to create properties that are not possessed by natural metals or other substances.*

allure *n.* the power to entice by charm

*Political groups in the United States often lobby Congress to use the **allure** of America's vast market as an incentive for countries to pursue policies in accordance with American policies.*

Terms from the Arts, Sciences, and Social Sciences

lobby: a group whose members share certain goals and work to bring about the passage, modification, or defeat of laws that affect these goals

Allure is also a verb meaning to entice by charm. The adjective is *alluring*.

*The idea of a clockwork universe is very **alluring** to some people because it explains how the universe was created, yet allows human beings to live in it without believing in supernatural intervention.*

Terms from the Arts, Sciences, and Social Sciences

clockwork universe: a theory of the origin of the universe that compares the universe to a mechanical clock created by God. According to this theory, once created, the universe continues to run according to the laws of nature and does not require further Divine intervention. This idea was very popular in the Enlightenment, an eighteenth-century philosophical movement that emphasized the use of reason to examine accepted beliefs and traditions.

***amalgamate** *v.* to combine into a unified whole

*In early 1999, six municipalities were **amalgamated** into an enlarged city of Toronto, Canada.*

***ambiguous** *adj.* unclear or doubtful in meaning

*The gender of the Mahayana Buddhist deity Avalokitesuara, the god of infinite mercy, is **ambiguous** in both China and Japan, where the god is sometimes called a goddess.*

Terms from the Arts, Sciences, and Social Sciences

Mahayana Buddhist: one of the three major traditions of Buddhism. It regards the historical Buddha as a manifestation of the celestial Buddha.

a canard	analogous	implode

Explanation: An important clue is the phrase “had to choose,” which suggests that President Truman faced a difficult choice. This makes *conundrum* (puzzle with no solution) an appropriate choice for Blank (i).

Repugnant (distasteful; offensive) is a good choice for Blank (ii) because it helps create a sentence describing the difficult choice between two alternatives, both of which presented serious moral difficulties. For Blank (iii) *capitulate* (surrender) is the best choice. This is signaled by the phrase “bring it [the war] to a swift end.”

The correct answers are **a conundrum, repugnant, and capitulate.**

2. NASA’s Apollo missions in the late 1960s and early 1970s may have played a significant role in (i) _____ the environmental movement by helping to put Earth’s ecosystem in a (ii) _____ perspective: photographs of (iii) _____ Earth from space perhaps encouraged many people to reflect on the folly of disrupting such a beautiful and intricately interrelated biosphere.

Blank (i)	Blank (ii)	Blank (iii)
hastening the demise of	hypothetical	a pristine-looking
alleviating problems in	cosmic	an apposite
crystallizing support for	canonical	an antediluvian

Explanation: The independent clause after the colon describes photographs of Earth from space. This signals that the best choice for Blank (ii) is *cosmic* (relating to the universe as distinct from Earth). An important clue to Blank (iii) is “such a beautiful and intricately interrelated biosphere,” which suggests that Earth was *pristine-looking*. The answer to Blank (i) can now be selected. The sentence says that photographs of Earth from space may have encouraged people to “reflect on the folly of disrupting such a beautiful and intricately interrelated biosphere” of Earth, so it makes sense that the Apollo missions had a part in *crystallizing support for* the environmental movement.

The correct answers are **crystallizing support for, cosmic, and a pristine-looking.**

UNIT 21

deride *v.* to mock

*Innovation often requires challenges to orthodox thinking; for example, in the late 1960s, scientists from the U.S. Department of Defense’s Advanced Research Projects Agency presented their idea of a vast network of computers to leading scientists from IBM and AT&T—companies with innumerable research breakthroughs to their credit—and were **derided** as impractical visionaries.*

APPLYING YOUR KNOWLEDGE—31-40

1. The development of antidepressant, antipsychotic, anti-anxiety, and other (i) _____ drugs has allowed treatment of conditions that in the past were (ii) _____ to therapy.

Blank (i)	Blank (ii)
hermetic	precursors
ineffective	impervious
psychotropic	analogous

Explanation: *Psychotropic* (having an altering effect on perception or behavior) is the correct choice because the three types of drugs mentioned all affect perception or behavior. If you didn't know the meaning of psychotropic, you could still arrive at the correct answer if you knew the meaning of *hermetic* and *ineffective*, which don't make sense in context. Also, the word "psychotropic" contains the Greek root *psych* (mind), showing that the word has something to do with the mind.

Clues to the answer to Blank (ii) are the words “development” and “past.” These words tell us that drugs developed recently have made possible treatment of conditions that in the past were *impervious* (incapable of being affected) to treatment.

The correct answers are **psychotropic** and **impervious**.

2. The French writer Alexis de Tocqueville noted in his *Democracy in America* (1835) that there seems to be a (i) _____ in American society: that bastion of individualism produces a profusion of public institutions requiring (ii) _____ to create.

Blank (i)	Blank (ii)
conundrum	tremendous ingenuity
weakness	a great collective effort
paradox	admirable altruism

Explanation: The clue to the answer for Blank (ii) is “public institutions.” It makes sense that public institutions require *a great collective effort* to create. Knowing the answer to Blank (ii) allows us to select the answer for Blank (i) because “collective effort” and “individualism” are antithetical. The *paradox* (contradiction, incongruity) is that a society that values individualism produces many institutions requiring groups of people to work together.

The correct answers are **paradox** and **a great collective effort**.

UNIT 41

APPLYING YOUR KNOWLEDGE—41-50

1. Labor unions sometimes (i) _____ the use of confrontational tactics and (ii) _____ in negotiation as necessitated by the entrenched power of big business.

Blank (i)	Blank (ii)
justify	compliance
abjure	intransigence
criticize	submissiveness

Explanation: An important clue to the answer to this question is the phrase "confrontational tactics," which signals that extreme methods are being discussed. The phrase "as necessitated" signals that labor unions sometimes see such tactics as necessary, so it makes sense that they would *justify* (demonstrate to be right) such tactics. Because the word for Blank (ii) is paired with the words "confrontational tactics," it should have a similar meaning, so *intransigence* (being uncompromising) is the correct answer.

The correct answers are **justify** and **intransigence**.

2. The name “impressionist” is a misnomer. Every painter is an impressionist insofar as he or she records his or her impressions, and all art is impressionistic. What Manet, the leader of the original movement, meant to say was that nature should not be painted (i) _____, but as it “impresses” the painter. He and his few followers tried to change the name to “independents,” but the original name has clung to them. Manet was extravagant in method and disposed toward low life for a subject, which has always (ii) _____ his popularity; but he was a very important man for his technical discoveries regarding the relations of light and shadow, the flat appearance of nature, and the exact value of color tones.

Blank (i)	Blank (ii)
at all	militated against
inadvertently	added to
as it actually is	sanctioned

Explanation: The words “but as it ‘impresses’ the painter” signal that the correct answer for Blank (i) is *as it actually is*.

Blank (ii): What is said about Manet in the sentence after the semicolon is positive, so what is said about Manet before the semicolon must be negative because of the word “but.” *Militated against* (exerted influence against) is the correct answer because this creates a negative statement about Manet.

The correct answers are **as it actually is** and **militated against**.

UNIT 51

miscellany *n.* mixture of writings on various subjects

APPLYING YOUR KNOWLEDGE—61-70

1. In intellectual discourse, statements often must be (i) _____ so that they are true; for example, the statement "The cause of war is economic competition between countries" is almost certainly too sweeping and could be (ii) _____ by being restated as "One of the major causes of war is economic competition between countries."

Blank (i)	Blank (ii)
refuted	rendered more credible
sanctioned	made more problematic
qualified	embellished

Explanation: The statement in quotes about the cause of war is described as "sweeping" (too inclusive), so the best choice for Blank (i) is *qualified* (limited).

The second statement in quotes is more believable than the first statement because it has been qualified. Thus, the best choice for Blank (ii) is *rendered more credible* (made more believable).

The correct answers are **qualified** and **rendered more credible**.

2. Albert Einstein expressed dismay about quantum mechanics because he felt it introduced a troubling (i) _____ into nature, which he felt should be able to be described by laws that, (ii) _____, are fully testable and verifiable.

Blank (i)	Blank (ii)
capriciousness	no matter how recondite
dilemma	however unscientific
aesthetic consideration	although empirically-based

Explanation: An important clue to the answers to this question is the phrase “laws that... are fully testable and verifiable,” which tells what kind of laws of nature Einstein preferred. *Capriciousness* (being subject to sudden change) is the best choice for Blank (i) because this quality would make laws of nature difficult to test and verify. Another clue to this answer is the word “troubling;” Einstein found this capriciousness of nature troubling.

The answer to Blank (ii) can be found by elimination of *however unscientific* and *although empirically-based*, which make no sense in context. *No matter how recondite* is a good choice because it makes sense that it would not matter if laws of nature were recondite (abstruse) as long as they could be tested and verified.

The correct answers are **capriciousness** and **no matter how recondite**.

UNIT 71

stanch *v.* to stop or check the flow of

*The country’s government has put controls on currency movement to **stanch** the flow of money out of the country.*

stentorian *adj.* extremely loud

***stigma** *n.* mark of disgrace or inferiority

*A problem with giving formal psychological treatment to a child who is believed to be poorly adjusted to society is that he may acquire a **stigma** as a result of officially being labeled as deviant, and he may act to corroborate society’s expectation.*

The verb is *stigmatize*.

*The civil rights movement helped to **stigmatize** racism, augmenting legal efforts to desegregate American society.*

stint *v.* to be sparing

Stinting on funding for education strikes many people as shortsighted.

Stint is also a noun meaning a period of time spent doing something

Isaac Asimov did a short involuntary **stint** in the army as a conscript during the 1950s.

***stipulate** *v.* to specify as an essential condition

The president's lawyer **stipulated** that he would appear before the investigative committee, but would answer only questions directly relevant to the issue at hand.

The noun is *stipulation*.

Stipulations in a contract should be clear in order to obviate the need for parties to resort to litigation.

***stolid** *adj.* having or showing little emotion

Behind the professor's **stolid** appearance is a fun-loving, gregarious character.

stratified *adj.* arranged in layers

One of the implications of an increasingly **stratified** economy for America might be increased social unrest.

The noun *stratum* means a layer.

In the English-speaking world many members of the upper classes historically have had a deprecatory attitude toward slang, a form of language they regard as indecorous and thus suitable only for the lowest **stratum** of society.

The plural of *stratum* is *strata*.

As it matured as a science, geology began to complement biology, a process that helped it to gain a more comprehensive view of the history of life on Earth by allowing fossils to be dated and identified (paleontology), often using knowledge gained from stratigraphy—the study of the deposition, distribution, and age of rock **strata**.

The noun *stratification* is used in the sociological term *social stratification*. It refers to the hierarchical arrangement of individuals in a society into classes or castes.

***striated** *adj.* marked with thin, narrow grooves or channels

The **striated** surface suggested to the geologist that he was walking over an area in which there once had been a torrent of water.

Striation is the noun.

300 High-Frequency Word Roots

300 Essential Roots and Prefixes

1,500 English Derivatives

MASTERING HIGH-FREQUENCY WORD ROOTS TO FURTHER EXPAND YOUR VOCABULARY

You have learned 800 very important words. You now have a good vocabulary for the GRE. However, no book could possibly teach every single word that might appear on the test. What is the most efficient way to learn even more words?

The answer—as was already mentioned in the introduction—is to learn important root words and build up your knowledge of advanced words based on these roots.

This section teaches you 300 high-frequency roots and prefixes, as well as 1,500 words derived from them. Learning these roots will give you a solid understanding of the building blocks of English words. It will also reinforce your learning of many of the words covered earlier in the book. Most importantly, it will give you the tools to decipher tens of thousands of the sort of academic words that appear in high-level reading material—and therefore could be included on the GRE.

HOW ROOTS WORK—AND HOW THEY CAN WORK FOR YOU

Most English words were created from Anglo-Saxon, Greek, Latin, French, Italian, and German roots and stems, and certain affixes—word elements that are affixed to words as prefixes or suffixes to refine the meaning or change a word's grammatical form. Of the more than one million words in English, approximately 60 percent come from Latin and Greek roots. This means that knowledge of Latin and Greek roots that frequently appear in English words will help you to gain a better understanding of the origin and meaning of many words. For example, in Unit 30 you learned that the word *exacerbate* means “to aggravate; make worse,” but do you know the origin of this word? *Exacerbate* was formed from a combination of the following: *ex* (an intensive prefix) + the Latin root *acer* (harsh, bitter), and the suffix *ate* (make, do). You also learned the word *aberrant*,

which means “deviating from the expected or normal course.” It is from *ab* (away from) + *errare* (to stray). Therefore, if you knew the meaning of the root *err* (to stray), and all of the suffixes attached to that root, such as *or* (a quality or condition), *ous* (full of), and *ant* (state of being), would you be able to decipher the meanings (or at least part of the meaning) of the following words? Try it: **err error errant erratic erroneous**

You would be correct if you said:

err means to make a mistake

an *error* is a mistake

errant means mistaken, or straying from the proper course

erratic means deviating from the customary course

erroneous means mistaken

Let’s expand on this exercise to demonstrate how you can put roots to work to help decode very advanced words. The following ten words were created from one or more Latin and Greek roots and certain common suffixes:

acuminate ergatocracy orthotropism neonate noctiluculent
osseous paleography sacrosanct sequatious somniloquy

Write down what you think are the meanings of each word. If you do not know the exact definition, jot down your best guess. Then check to see if your answers are correct, or at least partially correct. Give yourself 10 points for each completely correct answer and 5 points for each partially correct answer. Here are the correct definitions:

acuminate = make sharp; taper to a point

ergatocracy = government by workers

orthotropism = vertical growth

neonate = newborn child

noctiluculent = shining at night

osseous = bony; composed of, or containing bone

paleography = study of ancient writings

sacrosanct = extremely sacred; inviolable

sequatious = disposed to follow another

somniloquy = the act of talking in one’s sleep

Total your score. If your score is below 50 percent, your root skills for the GRE are low and you will benefit tremendously from an intensive study of the major roots and prefixes that are listed in *300 High-Frequency Word Roots*. If your score is between 50 percent and 80 percent, you are strongly advised to review these Greek and Latin roots for a superior score on the GRE.

So, exactly how were the words in our exercise formed from Greek and Latin roots?

acuminate is from *acu* (sharp) + *ate* (verb suffix meaning make)

ergatocracy is from *erg* (work) + *cracy* (government)

orthotropism is from *ortho* (straight, upright, correct) + *tropo* (turning, change)

neonate is from *neo* (new) + *natur* (born)

noctilucent is from *nocti* (night) + *luc* (light, shine)

osseous is from *oss* (bone) + suffix ending *ous* (full of; characterized by)

paleography is from *paleo* (ancient) + *graph* (write)

sacrosanct is from *sacrum* (religious rite) + *sanctus* (to consecrate)

sequatious is from *sequi* (follow) + suffix ending *ous* (full of; characterized by)

somniloquy is from *somni* (sleep) + *loqui* (speak)

You may say that it is very unlikely you will have to know words like *orthotropism* or *sequatious*. This may be true if you become a plumber. However, if you do a postgraduate degree and go onto a career in academia or a professional career in medicine, law, and other fields you will be seeing *plenty* of such words. After you complete this unit, you will be able to attack words like this that you do not know, and steadily keep expanding your vocabulary.

Of course, your learning of roots should not stop here. You should keep adding new roots to your knowledge. You can do this by regularly consulting a dictionary. When you meet a word you don't know and you cannot decipher it, look it up. The dictionary will give you the word's etymology (origin and history). Make sure to use a good dictionary such as the *American Heritage College Dictionary* or *Merriam-Webster's Collegiate Dictionary*. Let's take an example to show how it works. Below is reproduced part of the entry for the word "aberration" from the *American Heritage College Dictionary*, fourth edition. The etymology is given at the end of the entry in brackets [].

[Lat. *aberratio*, *aberration-*, diversion < *aberratus*, p. part. of *aberrare*, to go astray: *ab-*, away from; see *AB-* + *errare*, to stray.]

Now let's begin our study of *300 High-Frequency Word Roots*. Major roots and prefixes appear as headings in each "Root Roundup" on the following pages, and there is a list of common suffixes provided at the end of the section. After mastering all the words and roots in each "Root Roundup," do the "Root Work" exercise to make sure you have learned everything. Comprehensive "Root Roundup" reviews are provided after every five units. The correct answers are given on pages 411–416.

Read the passages below, and then answer the questions that follow them based on the information in the passages themselves and in any introductory material or notes. The correct answer may be either stated or merely suggested in the passages.

“You cannot plumb the depths of the human heart, nor find what a man is thinking; how do you expect to search out God, who made all these things, and find out his mind or comprehend his thoughts?”

—*Apocrypha*, Judith 8:14

- Experience has repeatedly confirmed that well-known maxim of Bacon’s, that “a little philosophy inclineth man’s mind to atheism, but depth in philosophy bringeth men’s minds about to religion.” In every age the most comprehensive thinkers have found in the
- (5) religion of their time and country something they could accept, interpreting and illustrating that religion so as to give it depth and universal application. Even the heretics and atheists, if they have had profundity, turn out after a while to be forerunners of some new orthodoxy.
- (10) What they rebel against is a religion alien to their nature; they are atheists only by accident, and relatively to a convention which inwardly offends them, but they yearn mightily in their own souls after the religious acceptance of a world interpreted in their own fashion. So it appears in the end that their atheism and loud protestation were in fact the hastier part of their thought, since what emboldened them to deny the poor world’s faith was that they were too impatient to understand it. Indeed, the enlightenment common to young wits and worm-eaten old satirists, who plume themselves on detecting the scientific ineptitude of religion—something which
- (20) the blindest half see—is not nearly enlightened enough; it points to notorious fact incompatible with religious tenets literally taken, but it leaves unexplored the habits of thought from which those tenets sprang; their original meaning, and their true function. Such studies would bring the skeptic face to face with the mystery
- (25) and pathos of mortal existence. They would make him understand why religion is so profoundly moving and in a sense so profoundly just. There must needs be something humane and necessary in an influence that has become the most general sanction of virtue, the chief occasion for art and philosophy, and the source, perhaps, of
- (30) the best human happiness.

—*Reason in Religion*, George Santayana

Select one answer choice for each of the following questions.

15. The phrase “the poor world’s faith” (line 16) refers to
- (A) the moribund belief systems of an earlier stage of history
 - (B) religions practiced in developing countries
 - (C) prevailing religious orthodoxy
 - (D) unfounded spiritual beliefs
 - (E) the need of indigent people to have faith that they will have a better life in the hereafter
16. The most accurate term to apply to the word “perhaps” as it is used in line 29 is
- (A) irony
 - (B) tongue-in-cheek
 - (C) qualification
 - (D) hyperbole
 - (E) oxymoron
17. The phrase “the scientific ineptitude of religion” as it is used in line 19 refers to the
- (A) failure of theologians to create a systematically structured belief system
 - (B) failure of religion to provide verifiable explanations for natural phenomena
 - (C) reluctance of orthodox religions to accept the discoveries of modern science
 - (D) disinclination of religious leaders to question church dogma
 - (E) inability of religion to provide a solid rational and empirical basis for its beliefs

In the following passage the author refers to articles by several scholars in two collections of papers on Mediterranean anthropology.

- “Mediterranean honor,” according to David Gilmore’s introduction, “is a ‘libidinized’ social reputation; and it is this eroticized aspect of honor—albeit unconscious or implicit—that seems to make the Mediterranean variant distinctive.” Again: “Mediterranean . . . unity is at least partly derived from the primordial values of honor and shame, and these values are deeply tied up with sexuality and power, with masculine and gender relations.” Again: “If a gender-based honor-and-shame moral system defines a

Mediterranean World, then this category emerges not simply as an example of butterfly collecting, but as a mutually intelligible framework of moral choices by which people communicate and gain an identity both with and within the group.” That same specification is underlined in the collection’s concluding essay by Stanley Brandes. “It is this pervasive sexuality that is particularly characteristic of Mediterranean value systems, of Mediterranean codes of honor and shame. In this, the codes may be distinguished from parallel moral systems elsewhere, in Japan, for example.”

In his 1977 survey of Mediterranean anthropology, John Davis claims, “There are three main forms of stratification which have been observed in the Mediterranean: bureaucracy, class, and honor. Each of them is related to the distribution of wealth, more or less directly. They are, for the purpose of analysis, ideal types, distinct elementary forms which, in substantive politics, are intertwined, mixed in varying degrees, variously important. Each is associated with an appropriate mode of political representation—again, ideal types, elementary forms, which in the *hugger-mugger of actual political activity have variable importance. These are: insistence on citizen’s rights; class struggle; patronage.”

Those three stratification systems are exemplified very clearly in John G. Peristiany’s essay. His fieldwork concentrated on the Greek Cypriot mountain village of Alona in the middle 1950’s. Stratification by bureaucracy and power is clear when the villager has to approach a government civil servant and when “in the impersonal interaction between citizen and civil servant the only claim upon the latter’s **philotimo* is that of his sectional interests, and these call for the assertion of his administrative dignity, for arrogance and the marking of social distance.” Stratification by wealth and class is clear “when the returned expatriate who had achieved success in a city environment wished to trade on this success as a means of achieving immediate recognition in the village . . . [and] considered . . . further that his financial success raised him above the confines of the village hierarchy.” But neither of those other stratifications is confused by the villagers with their own hierarchy of honor and shame. Peristiany concludes by comparing honor and honesty:

“The punctiliousness of honor must be referred to the code of an exclusive and *agonistic micro-society: that of honesty to an inclusive, egalitarian macro-society. Duty, in the first instance, is to those with whom one shares honor. In the second, the un-Greek macro-society, one’s duty is to all fellow citizens or, even further,

*hugger-mugger: disorderly confusion

**philotimo*: a Greek word meaning “love of honor”

*agonistic: combative

to all humans. . . . Honor is active. Here insecurity and the daily reevaluation of one's standing breed constant self-assertion and even heroism. The ideals of honesty and equality breed passive conformity and are more congenial to a conception of duty wide in (55) its application, but more accommodating in its expectation."

Select one answer choice for each of the following questions.

18. According to David Gilmore, honor and shame are
- (A) analogous values
 - (B) anachronistic moral codes found only in Mediterranean culture
 - (C) original values of Mediterranean culture
 - (D) immutable values in all cultures studied by anthropologists
 - (E) perennial truths
19. The phrase "punctiliousness of honor" as it is used in line 46 most nearly refers to
- (A) the uniqueness of the Mediterranean variant of honor
 - (B) the subjective nature of the concept of honor
 - (C) carefulness in observing rules governing honor
 - (D) the fact that honor is a universal concept found in all cultures
 - (E) the fact that the idea of honor is inextricably linked to the idea of honesty

Identify the sentence by writing its first three words and last three words on the line below.

Identify the sentence in which it is asserted that in the Mediterranean the moral code governing honesty is not as rigid as the moral code governing honor.

Ace the GREs with these On-the-Go Study Aids

Barron's GRE® Flash Cards 3rd Edition

Sharon Weiner Green, M.A. and Ira K. Wolf, Ph.D.

This updated set of flash cards prepares students for the current GRE. The cards test students' verbal and math skills and help them to focus on areas that require additional study. The set consists of:

- 250 verbal cards, including definitions and sentence-completion practice
- 250 math cards, including 75 math facts, 25 math strategies, 65 multiple-choice questions, 65 quantitative-comparison questions, 10 multiple-answer questions, and 10 numeric-entry questions
- Enclosed metal ring lets test-takers select cards to fit their study needs

ISBN 978-0-7641-6770-6, Boxed set of 500 flash cards, \$18.99, Can\$22.99

Answer: D

Draw in radii OA and OB . Then by Math Fact 56, $OA \perp PA$ and $OB \perp PB$, so quadrilateral $OAPB$ has two right angles and a 50° angle. Since the sum of all four angles in any quadrilateral is 360° , we have $90 + 90 + 50 + m\angle AOB = 360 \Rightarrow m\angle AOB = 360 - 180 - 50 = 130$.

Barron's GRE® Vocabulary Flash Cards 2nd Edition

Sharon Weiner Green, M.A.

This flash card set presents words and definitions that reflect the fluency and vocabulary skills of a college graduate.

- 500 high-frequency words that have appeared on recent GRE exams
- Each card lists a target word with pronunciation and part of speech
- Card's reverse side presents the word's definition, a sample sentence, and synonyms
- Enclosed metal ring lets test-takers select cards to fit their study needs

ISBN 978-1-4380-7608-9, Boxed set of 500 flash cards, \$16.99, Can\$19.99
